DATA CALCULATION NOTES:

- Individual questions from the client satisfaction surveys are collapsed into five domains, each domain consists of between 2 and 9 questions. A valid domain must contain at least 66% of the questions in that domain with an answer ranging from 1 to 5. All other responses are considered "missing". Once the domain score is calculated the 'positive' scores in this report are determined. For the Appendix A, a positive score must be an average that is below 2.5 (Appendix A scores range from 1 being most positive to 5 being most negative). For the Appendix B and C, a positive score must be an average that is above 3.5 (Appendix B and C scores range from 5 being the most positive to 1 being the most negative. The percentages in this report = (Total 'Positive' Domains) / (Total Domains).
- The BOARD scores are calculated based on all Agencies in the same board area EXCEPT the agency listed in the title bar of the report.
- The PPS scores are calculated based on all boards in the PPS region EXCEPT the board listed in the title bar of the report.
- The KEY INDICATOR section of the report counts the number of MOST POSITIVE (1 for Appendix A, 5 for Appendix B and C) responses for the question "I would recommend this agency to a friend or family member" and divides that by the total valid responses (Responses between 1 and 5) received for the same question.
